

We Love Chemistry ...

Spenomatic Labs and Chemicals (SLCL) offers innovative solutions to the Agriculture, Health care, and Manufacturing sectors. We provide organic farming inputs, advanced In Vitro Diagnostics (IVDs), and specialized chemicals to enhance efficiency and productivity across industries.

Healthier people, Efficient and Productive Nation:

Healthcare Sector

In Healthcare Sector, we offer

- In –Vitro Diagnostic kits
- Analyzers and
- Molecular Biology (RTPCR)

diagnostic solutions for communicable and non-communicable diseases.

In vitro diagnostic (IVD) investigations are indispensable for routine patient management. IVDs are a key tool for clinicians in assessing what is causing a patient's illness or symptoms. They allow clinicians to prescribe the most effective or appropriate treatment, and to avoid prescribing inappropriate treatment. This reduces late-stage healthcare expenditure.

DNA /RNA extraction, amplification, quantification and sequencing (RTPCRs) is the latest solutions not only in healthcare sector (humans & livestock), but it also contributes significantly in plant tissue, animal tissue, forensics, wild life conservation etc.

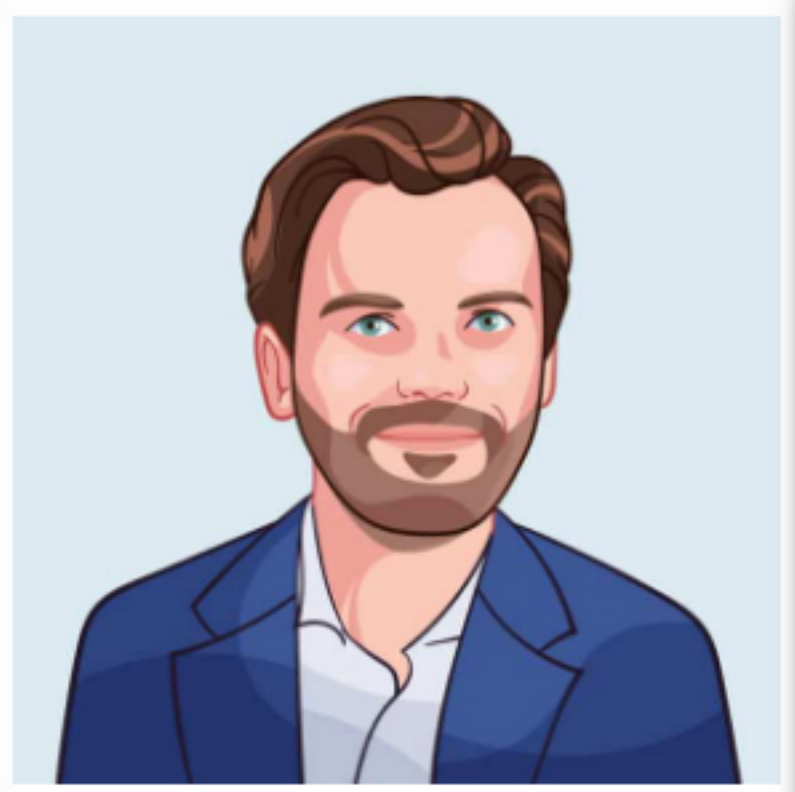

Industrious Nation, Prosperous Nation

Manufacturing Sector

In the Manufacturing Sector, we offer (a) Utility chemicals and (b) process mfg. chemicals. These are the 2 main areas of any manufacturing company i.e. to produce best quality of finished goods and to run utilities at maximum efficiency at optimum costs. We help manufactures in becoming the 'least cost producers' and also minimize the impact on environment by reducing pollution.
